

FELLOWSHIP 2010

PLANNING ARCHITECTURE LANDSCAPE ARCHITECTURE

PROGRAM →

HART | HOWERTON

BRANDON HALL

New York

WASHINGTON UNIVERSITY, ST. LOUIS

Architecture

Brandon will travel to select cities in the United States to explore the potential for the re-urbanization of each city's industrial fabric. By investigating the way in which architecture, urbanism and ecology relate to the industrial sites left behind on urban waterfronts, Brandon will explore how the redevelopment and reprogramming of those sites can reshape cities. His analysis will serve as a model of how re-envisioning the industrial aesthetic can transform the urban landscape of our nation's cities.

ALICE PHILLIPS

San Francisco

UNIVERSITY OF CALIFORNIA, BERKELEY

City & Regional Planning

Alice will investigate growth management in resort towns. Despite their perceived idyllic settings, resort communities often confront issues typically related to large cities, including traffic, transit, housing, and open space. Resort communities have employed varying growth management techniques and master plans, presenting an opportunity to compare and contrast successes and failures. Alice's research will set forth new strategies for dealing with growth in mountain resort communities.
